

Best weight distribution in the industry maximizes your payload

Dual auger cement system for accurate delivery of cement powder

How Does It Work?

Volumetric concrete mixing is batching based on volume rather than weight.

All volumetric equipment is calibrated by weight and the material is delivered to the mix auger by volume to produce the precise amount of fresh concrete required.

Cemen Tech equipment features a dual auger cement delivery, rack and pinion gate controls and a vanner edge belt system for consistent mix designs accurate within +/-1%

Large hydraulic oil reservoir for continuous operation w/o overheating

Dual rack & pinion gate controls for precise control of aggregates & fast changes in mix design

Exclusive Pump Master auger ensures consistent homogeneous mixing

With Cemen Tech volumetric mixers, mix designs can be changed instantaneously without compromising the quality of the concrete.

Specialty concretes like fiber-reinforced, colored or slurry can be quickly and easily produced from the same load of materials!

Cemen Tech volumetric mixers have been approved for city, municipal and state projects, meet or exceed all applicable AASHTO, ACI, and ASTM standards and are recognized by the NRMCA and VMMB.

Optional fiber systems deliver either pre-cut or spooled material for fiber reinforced concrete

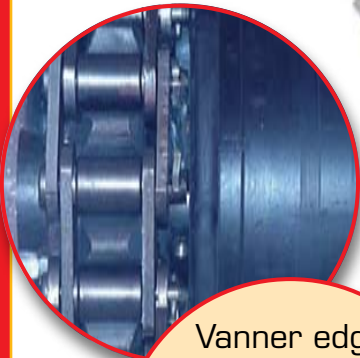

Divided aggregate bin for fast loading of large (stone) and small (sand) aggregates

Corrosion-resistant Polypropylene water tank w/pump and flow control valves provide precise control of water

Optional admixture and color systems deliver precise amounts to the mix

Electronically controlled air vibrators ensure a consistent flow of materials

Vanner edge belt with engineering class roller chain for consistent delivery of materials w/o spillage

THE WORLDS LARGEST & MOST RECOGNIZED BRAND OF VOLUMETRIC CONCRETE MIXERS
